

KRISMAR 2-HORSE

---

# Winter

CHECKLIST

**KRISMAR**  
HORSETRUCKS

---

KRISMARHORSETRUCKS.EU

- **Dealing with Frozen Windows** | Utilize your ice scraper or defroster. Avoid using hot water, as it can lead to window cracks. Please note that there is no need to keep your engine running while clearing the frost.
- **Windshield wipers** | Is your wiper fluid already provided with antifreeze wiper fluid? Do not wait any longer and spray a few times to ensure the entire system is filled with this liquid. In freezing conditions, check that the windshield wipers are not frozen. If your 2-horse is parked outdoors, consider placing a cork under the wiper arm to prevent contact between the wiper and the window.
- **Doors** | Always make sure that you have defrosting available against frozen locks and doors. You can buy these at the gas stations along the highway. Coat rubbers and doors with talcum powder or silicone spray to prevent freezing.
- **Fuel tank** | Winterize diesel engines by using winter diesel, which prevents diesel in the tank from solidifying in cold temperatures. Always keep your diesel tank as full as possible to minimize condensation.
- **Water** | If your Krismar is equipped with a water tank, don't forget to drain it. Also, detach the reel from the faucet and open it to release any pressure from the line. Leave the faucet open.

# TIPS

- Try to keep your lights free from snow and dirt.
- Avoid short trips whenever possible. Cold weather accelerates battery discharge, and short journeys may not provide sufficient time for recharge.
- Carry snow chains and check the relevant regulations for each country. Some countries may require or prohibit their use.
- Always have road salt on hand to ensure the safe loading and unloading of your horses.
- Exercise caution on the road, and don't forget to enjoy the winter magic.
